

Government Greening Commitment Compliance:

To be in accordance with the Government's latest sustainability framework Greening Government Commitments, which relates to the Government and their partner organisations, SLAMMIN EVENTS are engaged in making adjustments to their operations in order to keep on track for 2021 to 2025 period. The list that follows highlights the main points within the framework and sets out how these will be addressed.

- A. **Becoming Carbon Neutral by 2050** → For this target please refer to the separate Carbon Footprint Policy, where aspects such as travel, energy (consumption, renewables and efficiency) and adopting the latest technology are looked at.
- B. **Reducing Waste** → We are tackling the issue of waste in both the office and event environment, which pose very different issues. In the office environment most waste is generated from food and stationary packaging, we recycle where packaging allows, but are working towards reducing the amount of waste we incur through office meals by installing a functioning kitchen. Single use plastic, poses a greater issue on an event site when there is a greater mass of plastic packaging for various items, this is a supply chain issue that we will attempt to influence our supplier to undertake, as this framework requires as little as 5% of waste going to landfill.
- C. **Resource efficiency** → We aim to maximise the efficiency of the resources that we use. This includes having double glazing and insulation in our office space. Using efficient and up-to-date appliances, as well as high efficiency lighting. On site strict generator management partnered with clever site design is utilised to ensure maximum efficiency is enjoyed, minimising diesel use and lowering costs.
- D. **Reducing Water usage** → Our existing water usage in office is minimal, due to the size of our office, but can be reduced further by installing water efficiency features like a water saving flushes. When on an event site, using existing standpipes is always the preferred option. A meter is attached and use from the pipe is limited to the necessities only, mainly involving catering.
- E. **Procuring sustainable products** → On the event sites we use recycled plastic cups and aluminium cans. We have made the decision to have the majority of our drink stock in recyclable aluminium cans, reducing the amount of waste going to landfill, frustratingly that drink stock arrives in plastic wrap. There have been experimental re-usable cup schemes, with limited success so far. This is something that will be worked upon in the time period.
- F. **Nature Recovery Plan** → We are entering a stage where carbon offsetting is a popular choice when carbon release cannot be avoided, and we are investigating what we can do. With our space we will look to create a biodiverse habitat for
- G. **Adapting to Climate change** → Moving forwards the effects of climate change and the increasing number of extreme weather events will become more noticeable. An analysis will be carried out to understand the effects this may have on our future events.
