

Carbon Footprint Policy Statement

In this policy statement SLAMMIN EVENTS commitment to minimising their carbon footprint, where possible, will be outlined, displaying, that sustainable processes are part of the organisations overall strategy. Showing, that we are a company working and improving to reduce our negative effect on the environment, which in turn will help to improve our operational performance and improve the efficiency of resources used. Here the main issues will be highlighted along with what can be done, over the next five years, to combat our carbon emissions.

- As stated in the environmental policy: we aim to minimise the amount of waste that goes to landfill as a priority (in office and on site) reducing the burden on landfill and therefore methane generation.
 - o Increased usage of recycled and recyclable products.
 - o Limit and reduce the amount of single use / throw away items.
 - o Be mindful of the materials we are employing.
- To promote environmental awareness and responsibility amongst employees, partners, contractors and customers to help us pursue constant improvement towards our targets.
- We aim to minimise the emissions from day-to-day travel through utilising public transport. Moreover, as our office is in the immediate locality for most employees, they are able to walk and cycle to our office. In some cases, personal vehicles must be used but we will work to minimise this.
- For our partners who live further afield, remote working is welcomed, although, sporadic visits are necessary, the majority of the time this works well.
- We are exploring opportunities to offset our carbon emissions that are unavoidable, researching schemes that would mean after a length of time we would be extracting Co2 from the atmosphere overall through various tree planting projects.
- Out of the currently unavoidable carbon emissions, such as the use of diesel generators, we will be keeping a close eye on new technologies that would provide practical alternatives.
- Moving forwards, we expect our partners and suppliers to have credible and measurable carbon footprint policies, along with making steps to alleviate those emissions.
- Along with encouraging our own employees to make steps to reduce their own carbon footprints.
